

## Fingerprint Technology

# SX-Biometrics Suite™ AE

## Automated data file encrypting solution

## Next generation biometric solution protects sensitive information

Ideal for use in government, healthcare, financial and legal offices, SX-Biometrics Suite AE utilizes the industry's most robust data protection utilizing your lifetime ID, a fingerprint.

silex's SX-Biometrics Suite AE (Auto-Encryption) is an enhanced version of its biometrics security software. In addition to the standard Windows log on and password replacement functionality, the AE enables the user to set up folders where all files within will be automatically encrypted. Decryption of files require fingerprint authentication, ensuring the saved data remain secure and private.

### Features ;

- SX Biometrics Suite AE provides secure login by allowing anyone with valid domain login information stored on the smart card to login by fingerprint authentication either locally or via a network.
- Passwords are replaced by fingerprint authentication, as is the access to unsecured application software.
- Removing the fingerprint reader will lock the PC screen. To unlock the PC, the smart card in the fingerprint reader and fingerprint must be verified. Thus, the PC can always be protected even when the user walks away from the PC.

### HIPAA & SOX Compliance Solution ;

The SX-Biometrics Suite AE helps with HIPAA (Health Insurance Portability and Accountability Act of 1996) and SOX (Sarbane's-Oxley Act of 2002) by restricting data access rights and by forcing users to use the auto-encrypted folder, ensuring the data is protected.

#### 3 forms of identification by SX-Biometrics Suite AE

##### Biometrics

The user must have a fingerprint match when touching the fingerprint reader.

##### Possession

The user possesses predetermined access and authentication rights on a smart card (SIM) with their fingerprint reader.

##### Knowledge

A PIN code or password can optionally be required.

### Compatible fingerprint readers ;

COMBO-Mini

MUSB200-COMBO

- USB fingerprint reader with a SIM card or a Smart Card.
- Stores fingerprint minutiae on the card
- Designed to be easily carried by the user, serving as a portable ID verification (COMBO-Mini)
- 500 dpi sensor to meet US governmental requirement
